1 [Literate programming and structured authoring: Making complex document structures accessible through templates](#)

Felix H. Gatzemeier, Oliver Meyer

 September 2000 **Proceedings of IEEE professional communication society international professional communication conference and Proceedings of the 18th annual ACM international conference on Computer documentation: technology & teamwork**

Publisher: IEEE Educational Activities Department

 Full text available: pdf(529.18 KB) Additional Information: [full citation](#), [abstract](#), [references](#)

We address two problems of technical authors in structured environments: (1) Structure definitions of the SGML school are limiting: they require one primary hierarchy and do not cater for link types and (2) Real-life structure definitions are too large to be comprehended easily. As solutions, we propose graph types and usage templates. The edge types and inheritance of the proposed graph type model are useful modeling tools. We give examples for structures that can be expressed more precisely and ...

2 [Poster papers - short papers: Extracting unstructured data from template generated web documents](#)

Ling Ma, Nazli Goharian, Abdur Chowdhury, Misun Chung

 November 2003 **Proceedings of the twelfth international conference on Information and knowledge management**

Publisher: ACM Press

 Full text available: pdf(210.48 KB) Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

We propose a novel approach that identifies web page templates and extracts the unstructured data. Extracting only the body of the page and eliminating the template increases the retrieval precision for the queries that generate irrelevant results. We believe that by reducing the number of irrelevant results; the users are encouraged to go back to a given site to search. Our experimental results on several different web sites and on the whole cnfn collection demonstrate the feasibility of our a ...
